Station setup

To set up this activity as a station, you'll need:

1. The printed station instructions for this activity.
2. A printed station worksheet for each student or group (students can also access a digital PDF of worksheet via a QR code on the station instructions).
3. A Human Knee Active Learning Kit (Basic or Full model) with at least the minimal number of muscles attached (left in the image below).

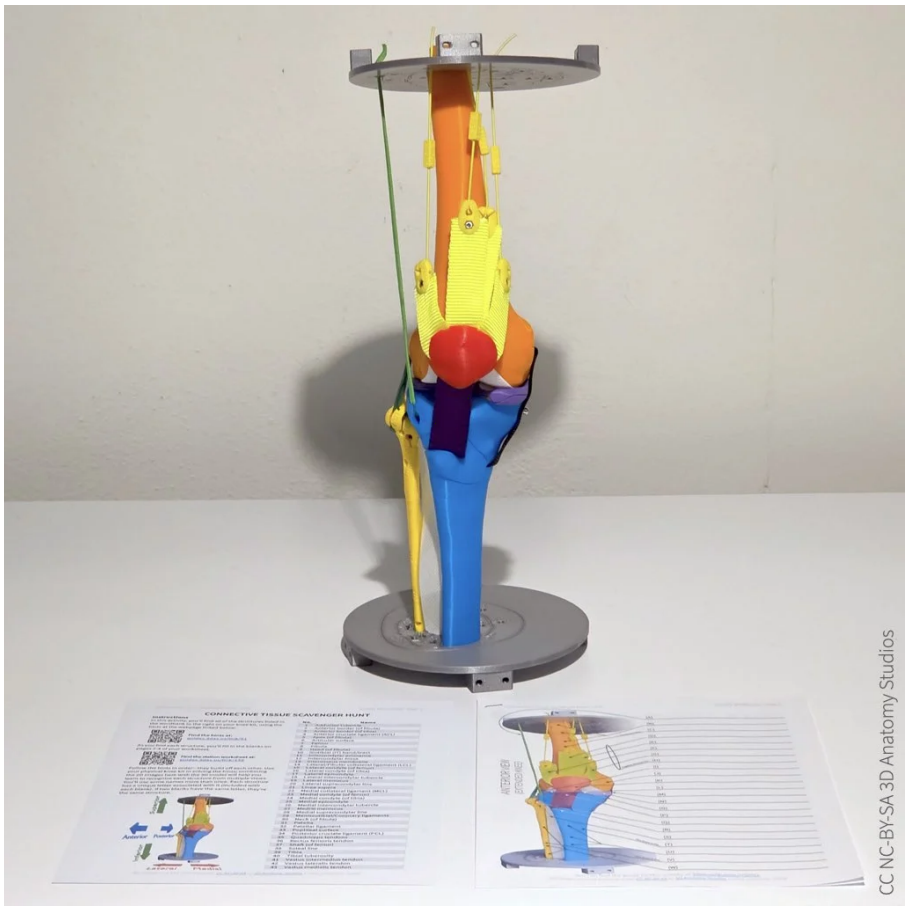

For this activity, you'll need a knee kit resembling one of the two images above. Your knee can have just a few muscles attached (left), all of the muscles attached (right), or some number in between.

This activity is easier with the minimal muscle set but it’s also possible to do with more muscles attached.

Your station setup should look something like this (in the photo below, the knee kit is the Basic model):
